Dear readers.

In this issue you will find papers that cover a wide variety of interesting and useful topics. Paper “Intelli-Restore as an Instantaneous Approach for Reduced Data Recovery Time” written by Leon Mugoh, Ismail Lukandu Ateya and Bernard Shibwabo Kasamani follows an earlier paper “Continuous Data Protection as a Strategy for Reduced Data Recovery Time” published in this journal (2011, Vol 2, No 4.), and helps organizations with adoption and improvement of data recovery strategies.

Next two papers deal with Knowledge Management. The first paper written by Jiri Ivanek is devoted to knowledge representation and the second paper written by Stepan Tesar et al, discusses the difference between knowledge acquired through practice and knowledge acquired through academic education.

The aim of the paper written by Jiri Franek and Marketa Zajarosova is to suggest segmentation of SME with respect to the level of ICT utilization. Level of ICT utilization in companies depends on how are ICT projects managed. Article “Use of Social Network Analysis in Early Phases of ICT Projects”, written by Libor Mesicek and Jiri Svoboda focuses on psychological and sociological aspects of ICT project teams, analyzing existing social networks within a company.

The final paper in this issue is written by Petr Marounek and presents a simplified and easy to use approach for estimation of software maintenance effort based on extending the PERT formula.

I hope that you find the papers in this issue interesting and useful in your professional endeavors. Please do not hesitate to let me know your views about the content of this issue and your suggestions for improving the quality and professional standard of our journal.

I wish you a pleasant summer break. Next issue of our journal will be available on October 31, 2012.

Best regards

Zdenek Molnar
